

Overcome M&A Challenges with BetterCloud

Mergers and acquisitions are notoriously difficult. BetterCloud helps unify SaaS applications (including multiple instances of a single application) for a single view of users, groups, and files. By giving you visibility into your applications, BetterCloud surfaces critical insights, gives the control needed during M&A, and highlights potential security gaps in SaaS applications.

BENEFITS

View All SaaS Data in Your New Environment in One Place

[Get a bird's eye view of the users, groups, files, channels, settings, and other data across SaaS applications.](#)

Understand the breadth of what exists in your new environment before you make changes.

Manage Multiple Instances of SaaS Applications

Once you have visibility, BetterCloud can [manage multiple instances of SaaS applications](#). This gives IT teams the flexibility to control each of the merging company's tech stacks until they eventually deprecate one side.

Apply Uniform Policies and Automated Workflows Across Instances

Each company is likely coming to the table with different processes and security philosophies. With BetterCloud, IT can [apply uniform policies](#) and automated workflows across your newly merged company.

Workflows in BetterCloud allow you to deliver the right access and information to new employees and automate the typically laborious process of fully offboarding exiting employees. These workflows can also be used to manage [contractors and consultants who need varying levels of access for a limited amount of time](#).

4. Google Google: Block mobile device for user `{{event.Google.Google.User}}`
5. Google Google: Revoke all apps for user

Create Granular Admin Roles for Your New IT Team and Get the Full Picture with Audit Logs

With BetterCloud's role-based privileges, IT can reduce the number of people who need super admin access during this transition. Customize the level of access for each admin based on their job responsibilities, and nothing more.

Audit logs allow IT to track all actions and automations that admins are running in BetterCloud and thus across applications. In a crucial moment of transition, IT can remain [compliant with regulations and standards](#) and keep a historical record of admin activity.
